# Introduction

Every day, the San Francisco Public Utilities Commission (SFPUC) delivers high-quality water to 2.7 million Bay Area customers, protects the environment and public health by treating wastewater and stormwater, and generates clean energy for San Francisco residents and businesses. Our services are funded by the rates that customers pay. Our system works 24 hours a day, 7 days a week. We are a not-for-profit public utility whose rates reflect the true cost of operating, maintaining, and upgrading our water and sewer systems.

The Rates Schedules and Fees document for Water and Sewer Services are a compilation of all rates schedules and fees charged to customers of the SFPUC.

## *Your Dollars at Work*

Water and sewer systems are critical to public health. The SFPUC is committed to providing customers with safe, reliable, and affordable drinking water and a combined sewer system that reduces flooding and protects the environment from pollution. These systems require ongoing maintenance and upgrades. Many parts of the SFPUC water system are nearly 100 years old, and the oldest parts of the sewer system date back to the Gold Rush. We need to continue to maintain and upgrade aging systems to prevent breaks, meet regulatory requirements, improve seismic safety, and adapt to storms as the climate changes. Your dollars pay for essential services and projects that protect public health.

# Retail Water and Sewer Rates, Charges, and Fees

## *Rate and Fee Changes*

In May 2023, the Commission approved three years of water and wastewater service rates for the fiscal years 2023-24, 2024-25, and 2025-26. The adopted water and sewer rate increases for FY 2023-24 became effective July 1, 2023. Rates, charges, and fees for FY 2024-25 and FY 2025-26 will become effective July 1, 2024 and July 1, 2025, respectively. Fees not part of the Commission approved rates were either:

- Escalated by the Consumer Price Index from the Controller's Office of the City and County of San Francisco,
- Adjusted by the 20-City Average Construction Index (CCI) published by Engineering News-Record (ENR) Magazine, or
- Unchanged

## *Water Rate Structure*

The water rate structure of the SFPUC is made up of two components:

- (1) A fixed monthly service charge based on meter size and
- (2) a variable charge based on water volumetric usage

The variable charge for residential customers is a two-tier rate structure, while non-residential customers are charged a uniform commodity rate.

## *Sewer Rate Structure*

The sewer rate structure of the SFPUC is made up of three components:

- (1) a fixed monthly sewer service charge.
- (2) a variable wastewater rate based on assumed percentage of metered water usage returned to the sewer system.

Single- and multi-family residential variable charges are based on a flat rate per discharge unit, calculated from the rate components assuming domestic strength sewage. Non-residential customers are charged unique rates for discharged flows as well as sewage loading (Chemical Oxygen Demand, Total Suspended Solids, and Oils & Grease). The loading rates charged are based on the customer's business type.

- (3) a fixed monthly stormwater charge based on the property size and/or parcel characteristics.

The *Stormwater charge* is assessed on a "simplified" three-tiered structure for residential customers, based on the net parcel size, with smaller parcels being charged a lower rate that gradually increases for larger parcels. Non-residential, mixed-use, and large residential parcels (over 6,000 square feet or with more than six dwelling units) would be assessed using a "standard charge" based on their total permeable and impermeable surface area.

## *Drought Surcharge and Conservation*

The SFPUC may implement a temporary drought surcharge to cover its operating costs in the event of a declared water delivery reduction that results in decreased water sales. This would apply to the volumetric portions of both water and sewer rates (not to the monthly fixed service charge or stormwater charge). The Commission will activate the temporary drought surcharge when it imposes delivery reductions per the Retail Water Shortage Allocation Plan and for either voluntary or mandatory water reduction. At that time, SFPUC will estimate the revenue reduction resulting from water use savings, as well as the surcharge to retail rates necessary to meet the

revenue requirement based on lower water sales. The Commission will remove the temporary surcharge when the water use reductions are lifted, per the Retail Water Shortage Allocation Plan.

### **Water and Sewer Rate and Fee Resolutions**

## Water Drought Surcharge

If the Commission, at a publicly noticed meeting, adopts a resolution declaring a stage of water delivery reduction in accordance with the Retail Water Shortage Allocation Plan (i.e., Stage 1, Stage 2, or Stage 3), the following schedule of drought surcharges shall be applied to the volumetric portion of retail water rates as of the date of the Commission resolution or any effective date designated by the Commission. For residential customers, the surcharges shall be based on the assumption that the overall demand reduction is split evenly between Tier 1 and Tier 2. Each non-residential customer shall incur the percent drought surcharge uniformly. The overall required surcharge is based on the final formula: surcharge (\$ per CCF) = Water Revenue Shortfall from reduced flow/ Reduced Water Flow.

Water Shortage Contingency Plan Stage	Target Water Usage Reduction	Drought Surcharge on Volumetric Water Rates
<b>Stages 1 - 3</b>	5%	Up to 5%
<b>Stage 4</b>	5-18%	Up to 18%
<b>Stages 5 - 6</b>	18-32%	Up to 32%

The drought surcharges shall remain in effect until the Commission adopts a resolution to rescind the water delivery reduction.

## Customer Classification

### *Class Determination*

Upon application for new service, each Customer shall be assigned to a Customer Class based on the City's evaluation of the Customer's waste discharge characteristics in accordance with the requirements of this resolution and applicable laws and regulations. Such Customer Class determination shall be based on the Customer's description of its current operation and use of the collection, treatment, and disposal facilities of the City. Such description shall be subject to verification by the City.

### *Change in Classification*

Customers requiring or requesting a change in their classification shall do so in writing within 30 days of a change in operations.

### *Unmetered Service*

In circumstances where a Customer's discharge is not measured by metered water consumption, the General Manager is authorized to implement appropriate requirements and procedures for determining a Customer Charge consistent with the requirements of this resolution and applicable state and federal laws.

## SCHEDULE A: Residential Wastewater

Applicable to Single-Family and Multi-Family Residential wastewater customers. The rates under this schedule are based upon the typical strengths for Domestic Domestic Wastes (SIC Group 4), as determined by the SFPUC. The charges based on discharge units for all Residential wastewater users are as follows:

	Fiscal Year		
	2023-24 Effective July 1, 2023	2024-25 Effective July 1, 2024	2025-26 Effective July 1, 2025
Monthly Service Charge	\$4.85	\$5.28	\$5.76
Volume per Discharge Unit <sup>1</sup>	\$16.91	\$17.80	\$18.72

1 unit or 1 CCF (centi (hundred) cubic feet of measured water consumption is equal to 748 gallons.

A discharge unit shall be based on the customer's metered water use multiplied by the flow factor and represents the quantity of metered water use returned to the sewage system as wastewater. By default, residential single-family customers are assumed to have a flow factor of 90% and multi-family residential customers are assumed to have a flow factor of 95%. Customers whose usage of water varies from typical patterns may apply for an adjusted flow factor.

## SCHEDULE B: Non-Residential Wastewater

Users other than Residential wastewater users charged under Schedule A (i.e., Non-Residential), shall be charged the cost for each parameter according to the following:

	Fiscal Year		
	2023-24 Effective July 1, 2023	2024-25 Effective July 1, 2024	2025-26 Effective July 1, 2025
Monthly Service Charge	\$4.85	\$5.28	\$5.76
Volume per Discharge Unit <sup>1</sup>	\$9.74	\$10.09	\$10.43
PLUS Chemical Oxygen Demand (COD) per Pound	\$0.861	\$0.925	\$0.994
PLUS Total Suspended Solids (TSS) per Pound	\$1.681	\$1.808	\$1.944
PLUS Oil and Grease (O/G) per Pound	\$1.053	\$1.142	\$1.239

<sup>1</sup> 1 unit or 1 CCF (centi (hundred) cubic feet of measured water consumption is equal to 748 gallons.

A discharge unit shall be based on the customer’s metered water use multiplied by the flow factor and represents the quantity of metered water use returned to the sewage system as wastewater. By default, non-residential customers are assumed to have a flow factor of 90%. Customers whose usage of water varies from typical patterns may apply for an adjusted flow factor.

Those users whose parameter loadings of COD, TSS, and O/G are not based on periodic sampling shall be charged on the basis of standard parameter loadings established by the General Manager for each SIC code in accordance with applicable state and federal laws and regulations, and as summarized in the table below.

SIC Group	SIC Group Description	COD (lb/Unit)	TSS (lb/Unit)	O/G (lb/Unit)
SIC Group 2	Hotel without Eating	1.2111	0.3496	0.1623

SIC Group 12	Restaurant/Kitchen with Automatic Grease Removal Device or Gravity Grease Interceptor	4.4636	1.8916	0.6243

## Schedule C. Standard Stormwater

This schedule shall apply to all non-residential parcels, mixed use parcels, lots without wastewater service, residential parcels greater than 6,000 square feet of net parcel area and/or having more than 6 dwelling units, and/or any other parcels which do not meet the eligibility criteria for Schedule D. Net parcel area is the gross parcel area recorded with the San Francisco Assessor's Office less any excluded area that does not drain to the SFPUC combined sewer system. The designation of a parcel as non-residential or residential will be based on the presence of wastewater accounts billed under Schedules A and B, above.

Parcels meeting the criteria of the standard stormwater charge will be assessed on a per 1,000 square foot basis for all permeable and impermeable area on their property as follows:

	Fiscal Year		
	2023-24 Effective July 1, 2023	2024-25 Effective July 1, 2024	2025-26 Effective July 1, 2025
Stormwater Charge per month			
Permeable Area per 1,000 square feet	\$0.19	\$0.41	\$0.67
Impermeable Area per 1,000 square feet	\$1.89	\$4.11	\$6.72

Permeable and impermeable areas are determined for each parcel using geospatial analysis. Customers may submit evidence of their measured areas if they believe the data for their property should be modified.

In the event that multiple accounts share one Parcel, the charge will be calculated for the total parcel area and shared equally by the number of accounts. The shares charged to each account may be adjusted with written agreement of all account holders on a Parcel.

Customers who install green infrastructure projects to manage stormwater on their property may apply for a stormwater credit and reduce their monthly charge.

## Schedule D. Simplified Residential Stormwater

This schedule shall apply to Single-Family and Multi-Family Residential wastewater customers with 6,000 square feet or less net parcel area and with 6 or fewer dwelling units as recorded in the San Francisco Public Utilities Commission’s billing records. Net parcel area is the gross parcel area recorded with the San Francisco Assessor’s Office less any excluded area that does not drain to the SFPUC combined sewer system. The designation of a parcel as non-residential or residential will be based on the presence of wastewater accounts billed under Schedules A and B, above.

The charges under this schedule are based upon the average permeable and impermeable square footage of parcels within each tier group and the respective rate for parcel area as shown in Schedule C, as determined by the General Manager.

	Fiscal Year		
	2023-24 Effective July 1, 2023	2024-25 Effective July 1, 2024	2025-26 Effective July 1, 2025

Tier 3: 3,301 – 6,000 square feet parcel area	\$5.41	\$11.79	\$19.27

In the event that multiple wastewater accounts share one Parcel, the charge will be calculated for the total parcel area and shared equally by the number of accounts. The shares charged to each account may be adjusted with written agreement of all account holders on a Parcel.

Customers who install green infrastructure projects to manage stormwater on their property may apply for a stormwater credit and reduce their monthly charge.

## Wastewater Drought Surcharge

The overall required surcharge is based on the final formula: surcharge (\$ per CCF) = Wastewater Revenue Shortfall from reduced flow/ Reduced Wastewater Flow.

Water Shortage Contingency Plan Stage	Target Water Usage Reduction	Drought Surcharge on Volumetric Wastewater Rates
Stages 1 - 3	5%	Up to 5%
Stage 4	5-18%	Up to 18%
