FREQUENTLY ASKED QUESTIONS CONTINUED

I own or am leasing a property in a Flood Risk Zone, what are my disclosure responsibilities?
Pursuant to Article 51 of the San Francisco Police Code, sellers of properties like yours located within the Flood Risk Zone must provide a prospective buyer with a specific written disclosure before (1) transfer of title and/or (2) execution of a real property sales contract. The Ordinance requires landlords to provide the same disclosure to prospective tenants before executing a lease.

I believe my property was incorrectly included in a 100-Year Storm Flood Zone. Is there a process for review of the Final Map’s inclusion of my property?
The SFPUC has established a parcel review process through which parcels will be assessed and, if justified, removed from the 100-Year Storm Flood Risk Zone shown on the Flood Map. This process is specific to parcels and does not apply to portions of parcels or structures/units within a parcel. A parcel owner would undertake this process to be removed from the 100-Year Storm Flood Risk Zone and relieved of the associated disclosure requirement. Removal of a parcel from the 100-Year Storm Flood Risk Zone does not mean the property is no longer at risk of flooding.

The physical characteristics or criteria that form the basis for removing a parcel are as follows:
- Parcel ground elevations (not buildings or units) are entirely above the 100-year storm flood elevation
- Barriers (e.g. walls or solid fences) divert stormwater from the entire parcel, such that no part is within the 100-year storm flood extent

The process for reviewing and removing a parcel from the 100-Year Storm Flood Risk Zone is as follows:
- Property owner submits this parcel review request form to the SFPUC.
- SFPUC staff will perform a preliminary desktop review and site visit to the parcel to determine if additional data is needed.
- The parcel owner shall cooperate and assist SFPUC in such review efforts, including but not limited to, providing SFPUC with access to the parcel to conduct site inspections and/or surveys.
- Following all necessary site assessment activities, SFPUC will determine whether one or more of the Removal Criteria have been satisfied. We will send the parcel owner written notice of its parcel determination.
- The Map will be updated on an annual basis to incorporate and reflect all property review determinations that have been made.

BACKGROUND
To improve information available to the public about flood risk from storm runoff in the City and County of San Francisco, the San Francisco Public Utilities Commission (SFPUC) has developed a 100-Year Storm Flood Risk Map (Flood Map). This Flood Map is an informational tool to illustrate flooding from storm runoff in a 100-year storm.

The term “100-year storm” is used by climatologists, hydrologists, and civil engineers to simplify the definition of an intense storm event that statistically has a 1% chance of occurring in any given year. A 100-year storm event is less likely to happen than your average storm, but they can and do happen, sometimes within just a few years of each other or even within the same year.

The Flood Map delineates 100-Year Storm Flood Zones. Parcels within the 100-Year Storm Flood Zones are highly likely to experience “deep and contiguous” flooding during a 100-year storm. “Deep and contiguous flooding” means flooding that is at least six inches deep spanning an area at least the size of half an average city block.

PURPOSE
The purpose of the Flood Map is to inform existing and future property owners about flood risk on their properties. This information will enable property owners to take steps to protect their property from stormwater flood risk. It also promotes a transparent process for determining and disclosing flood risk at the point of sale and for new leases in a manner that is consistent with existing State law that requires sellers and lessors to disclose natural hazards, including flood risk.

In 2019, the City passed legislation that requires sellers or landlords of property in San Francisco to disclose to buyers or new tenants that the property is located within the flood risk zone delineated on the San Francisco Public Utilities Commission’s 100-Year Storm Flood Risk Map.
FREQUENTLY ASKED QUESTIONS

How did the SFPUC develop the Flood Map?
To delineate the boundaries of the 100-Year Storm Flood Zones, SFPUC staff:

- Used a hydrologic and hydraulic computer model to simulate urban flooding occurring citywide during a 100-year storm. This sophisticated computer model uses information about the SFPUC’s sewer collection system (drains, pipes, pump stations, and other infrastructure), topography, and buildings to map where surface water and/or flooding is expected. The City uses the same model to plan capital infrastructure projects designed to manage other types of storms.
- Drew boundaries around those parcels and properties affected by “deep and contiguous” flooding, flooding that is at least six inches deep spanning an area at least the size of half an average city block.

The Flood Map shows flood risk from storm runoff only. It does not show the risk of flooding from San Francisco Bay or the Pacific Ocean, including the effects of inundation from future sea-level rise. The Flood Map also does not show the exact depth of flooding or historical record of flooding at a given location. Property owners and other users of the Flood Map should be aware that areas outside of the 100-Year Storm Flood Zones shown on the Flood Map may experience shallower or more localized flooding in a 100-year storm or flooding in storms larger than a 100-year storm.

Which properties are included in the 100-Year Storm Flood Zones?
There are about 2,100 parcels in the 100-Year Storm Flood Zones shown on the Flood Map (this figure represents 1% of parcels citywide). Approximately half of these are residential parcels, while the rest are a combination of commercial, industrial, and public parcels. Many of the properties in the 100-Year Storm Flood Zones are built along historical waterways that used to be creeks or wetlands.

Why do I need to know if my property is subject to flooding during a storm that has only a 1% chance of occurring in a given year?
A 100-year storm, while an uncommon event, has occurred in certain San Francisco neighborhoods in the past decade and could occur every year.

What are the potential impacts of flooding on properties located in the 100-Year Storm Flood Zones?
The Flood Map shows parcels that are likely to experience at least six inches of flooding. Some parcels in the 100-Year Storm Flood Zones could be subject to more than six inches of flooding during a 100-year storm. This level of flooding could take place anywhere on the street and/or sidewalk in areas shown on this map. How such flooding would impact a property depends upon the characteristics of the given property. For example, if a building has steps up to a door, the water may not enter the building via that door, but it could otherwise enter the building through cracks, a garage, or the sanitary sewer system (if there is no backflow preventer). A door at the street level could also allow a significant amount of water to enter the house or business.

FREQUENTLY ASKED QUESTIONS CONTINUED

Can I purchase flood insurance for my residence or property?
Yes. San Francisco participates in the National Flood Insurance Program (NFIP), which is administered by the Federal Emergency Management Agency (FEMA). The program provides federally backed, flood insurance for homeowners, renters, and businesses in all areas of San Francisco. Flood insurance under the NFIP provides coverage for flood damage to buildings and contents and can be purchased through many private property and casualty insurance companies. As with any other type of insurance, it is important to know what a policy does and does not cover. For additional information on flood insurance for renters or homeowners, including how to buy it and how much it should cost, visit the FEMA webpage at floodsmart.gov or call 1-800-427-4661.

What is the relationship between the City’s Flood Map and the FEMA maps?
The SFPUC 100-Year Storm Flood Risk Map shows flood risk from storm runoff only. It does not consider flood risk in San Francisco from other causes, such as inundation from the San Francisco Bay or Pacific Ocean, which are shown on the map that FEMA has prepared for San Francisco. FEMA maps do not show flooding from storm runoff in San Francisco because our historical creeks and waterbodies have been built over and are no longer open waterways. In most areas, the flood hazards identified by SFPUC and FEMA’s maps are separate. There are a few areas near the shoreline of San Francisco where SFPUC’s Flood Risk Zones overlap with the FEMA-designated floodplains. For more information on the FEMA Preliminary Flood Insurance Rate Maps please see https://onesanfrancisco.org/San-Francisco-Floodplain-Management-Program.

You can also search FEMA’s downloadable map products from their website. For information on flood risk from sea level rise, please see the Sea Level Rise Vulnerability Zone Map (http://onesanfrancisco.org/sea-level-rise-guidance).

What steps can I take to reduce flood risk at my property?
In addition to purchasing flood insurance, many San Francisco residents have taken advantage of the SFPUC’s various programs to help them prepare and better protect their properties from major rain events, including the following resources that you can learn about at sfpuc.org/RainReadySF:

- Check your eligibility and consider the SFPUC Floodwater Grant Program, which reimburses property owners up to $100,000 for flood-proofing projects. For more information and to review eligibility criteria, please visit sfpuc.org/floodwatergrant
- Contact 311 online at sf311.org or by dialing 3-1-1 to report issues such as flooding, clogged catch basins, sewer backups, and displaced manhole covers.
- Participate in Adopt a Drain SF, which promotes efforts to clear away leaves and debris from the top of catch basin grates regularly in order to help keep stormwater flowing smoothly.
- Monitor the weather reports carefully and elevate belongings in your garage and any low-lying areas on your property if you live in a flood-prone area.

In addition to traditional flood insurance, homeowners, renters, and businesses may also consider San Francisco’s flood resiliency programs that are designed to help them plan for future sea-level rise.

In addition to regularly testing and maintaining emergency backup power sources in your residence or business, you can learn about the San Francisco Emergency Preparedness web resources that you can learn about at sfpuc.org/RainReadySF.
